Version	Date
eSignal 21.3	January 2024

eSignal 21.3 introduces several new features and enhancements for active traders and investors. Below is a summary of the new features, enhancements, and important bug fixes. For more detailed information about any of these features please visit the eSignal KnowledgeBase (kb.esignal.com).

Studies

- NEW **VWAP Anchored** User Request
  The VWAP Anchored (currently available only as a Built-in study) offers the same exact functionality as the original VWAP, but can additionally calculate the indicator on any interval including Daily or higher. Furthermore, users can determine the starting point of the VWAP Anchored based on either number of bars, days, or a specific date.

- NEW **GET Auto MOB** GET / User Request
  The Advanced GET Auto MOB study (currently available only as a Built-in) will automatically apply to the chart a user defined number of MOBs (see this article in the eSignal Kb for detailed information on the MOB drawing tool) using GET Pivots as top/bottom projection points.

- NEW **GET EW Auto FIB** GET / User Request
  The Advanced GET EW Auto FIB study automatically projects the more traditional and commonly used FIB Retracements and/or Extensions for the most recent Elliott Wave based on the user defined Elliott Wave type. These projections help in identifying key support and resistance levels based on the Advanced GET Elliott Wave study.

- NEW **GET VWAP Anchored** GET / User Request
  The GET VWAP Anchored (currently available only as a Built-in study) offers the same exact functionality as the original GET VWAP but can additionally calculate the indicator on any interval including Daily or higher. Furthermore, users can determine the starting point of the GET VWAP Anchored based on either number of bars, days, or a specific date and have it restart its calculations at every GET Pivot.

- Added the option to Apply a Study to the Advance/Decline Line and Advance/Decline Ratio studies. User Request

- Added the option to alert on line crossings of the Ergodic MACD and Ergodic TSI studies. User Request

Chart (including Market Profile where applicable)

- NEW Users can now directly modify the Z-order of any object in a Chart (symbol, study or drawing) by selecting the object and then using the toolbar icons or context menu commands or hotkeys to move that object to the front, forward, backward or to the back without the need of going into Edit Chart.

- NEW Users can now display the cursor related values of a symbol and/or study directly on the corresponding Status Line(s). These values are displayed in the same color of the plot(s) thereby making them easily identifiable.

- NEW Users now have an option to display a marker on the Status Line of a symbol to indicate when new News for that symbol has been received. Clicking on the marker opens the News window with the related news and grays out the marker.

- Added "High and Low" Price Lines. These horizontal lines (and related labels) are dynamic and always aligned to the highest High and lowest Low displayed on the chart at any given time. User Request

Version	Date
eSignal 21.3	January 2024

- Added "Limit Up/Down" Price Lines. These horizontal lines (and related labels) are displayed (when applicable) at the limit up/down prices set by the exchange for a given security. **User Request**

- Added End Type option to the Polyline drawing tool (like those available in the Pencil and Trend Line drawings). Note that the End Type is applied only to the beginning and end of the Polyline. **User Request**

- Added End Type option to the Swing Ruler drawing tool (like those available in the Polyline, Pencil and Trend Line drawings). Note that the End Type is applied only to the beginning and end of the Swing Ruler. **User Request**

- Added hotkey to Hide/Show All Studies. **User Request**

- Improved the legibility of the Labels on the Horizontal Line drawing tool by increasing the spacing between the Label and the anchor point of the line. **User Request**

- Added an option to use a different color for the extension of the Channel and Regression Trend Channel drawing tools **User Request**

- Added Volume study to all Japanese type Charts (Renko, Kagi, Price Break). **User Request**

- Increased the upper limit (now 100) for the Price Break setting of the Price Break chart type. **User Request**

- Increased the precision for the Offset setting in studies that include this parameter. **User Request**

NEW **Symbol Info**

This new dialog which can be called from any window displays all the relevant information for the selected symbol including amongst other things, Security Type, Exchange on which it is traded or listed, Tick Size, Point Value, Sessions and where applicable Splits, Earnings and Dividends (including their dates).

Dashboard

- Added option to color the Gauges of the Dashboard in any user selected color. **User Request**

Composite Symbol Manager

- Added Symbol Linking (outgoing only).

- Enhanced the context menu to now include Open In… which functions in the same way as in other grid windows (multiselection etc.).

Account Manager

- Added New Order option in the context menu of the Account Manager when clicking in an empty space.

- Removed "Include empty row" from the Sorting Panel of the Account Manager.
